

A1
a means for preparing a transcription of what was heard;
a means for comparing the items with the transcription; and
a means for measuring intelligibility coupled to the comparing means.

- B1
A2
24. (Amended) A method of measuring intelligibility, comprising in combination:
obtaining responses from a speaker repeating items;
presenting the responses to a listener;
creating a transcription of what the listener hears;
measuring accuracy by comparing the items with the transcription; and
determining an intelligibility score of the speaker based on at least in part on the
measuring step.

Please add the following new Claims 41, 42, 43, and 44.

41. (New) The system of Claim 10, wherein the intelligibility score is an objective measurement of the speaker's intelligibility.

A3
42. (New) The system of Claim 11, wherein the intelligibility score is an objective measurement of the speaker's intelligibility.

43. (New) The system of Claim 21, wherein the intelligibility score is an objective measurement of the speaker's intelligibility.
